SECURITY PROJECTS

Hasnahena — Interest-Free Cooperative Finance Platform (Solo, in production) hasnahenafoundation.com
Next.js, Go, PostgreSQL, Cloudflare, Sentry, gitleaks, GitHub Actions
- Secured a **live** finance app holding real balances and NID documents: RBAC on every endpoint, bcrypt, self-hosted JWT with **server-side revocation checked by both backends**, all sessions revoked on password change.
- Cloudflare-aware rate limiting and login lockout; **anti-enumeration** auth responses; trigger-enforced append-only audit logs.
- Two Content Security Policies per route type with CI asserting **zero CSP violations**; gitleaks secret scanning over the full git history, golangci-lint and Dependabot.

BruteBuddy — Automated Security Testing Tool (Solo) GitHub
Python, requests, ThreadPoolExecutor, CLI
- CLI for **automated fuzzing** and brute-force testing of login endpoints: multi-field payloads, generated values, zip/product combinations, custom headers and cookies, automatic re-authentication; parallel `ThreadPoolExecutor` requests run **3× faster**.
